

Case Study

The Hub, Whakatane

A very tight time frame from site measure to installation concluded the manufacturing of joinery by Elite Windows & Doors' Tasman Aluminium much quicker than usual to help avoid any delays which could impede the progress of the project.

One of Tasman Aluminium's challenges involved supplying and installing 100mm shopfront and auto sliding doors to 17 large tenancies (approx 1100 sq m of shop front joinery).

Regular attendance at weekly site meetings and close liaison with site project management personnel ensured a constant flow of information and communication of the ever changing tasks at hand and the overall construction schedule.

Through successful ongoing channels of communication, Tasman Aluminium were able to plan ahead to ensure all requirements on our behalf were met.

The project was completed on time and within budget.

This was an ideal project for Tasman Aluminium and proved that this fabricators systems are not only robust but diverse, and can handle large, ongoing projects.

PROJECT The Hub, Whakatane
FABRICATOR Tasman Aluminium
PROJECT DEVELOPERS
Haydn & Rollett
DEVELOPMENT PARTNERS
Willis Bond & Co

"This project has resulted in Tasman developing an excellent working relationship with Haydn & Rollett and has led to further amazingly diverse collaborations."

Peter Ryder
